

Remote Control systems

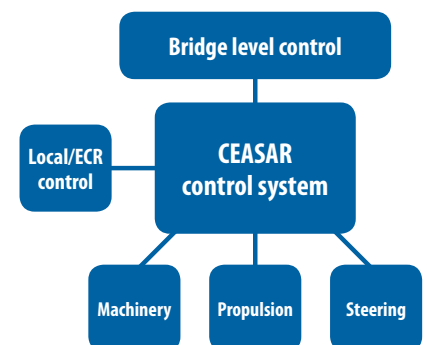

As the world's leading design and manufacturing company of nautical controls and -systems, Kwant Controls delivers high-quality solutions. The Kwant Controls team of maritime experienced professionals daily seeks and ensures technological innovation in the field of control units, systems and nautical navigation. We take pride in exceeding your expectations. Each control unit is tailored and configured to your specification where the reliability and trustworthiness of our products are our main targets.

Generic technology for customized solutions

The Kwant Controls Nautical controls are typically part of the larger control system and its subsequent subsystems aboard vessels. Over the years Kwant Controls has developed modularized, smaller and larger control system concepts, in cooperation with world's leading marine companies. For enhanced operations and safe control, according to class regulations. At early stage of the project, by functional specification the scope and system functions are defined. This forms basis for our engineering process towards full flush simulation tests at our in-house test-facility.

- Suitable for all kinds of propulsion and steering controls
- Newbuild and retrofit
- Flexible remote control interfacing
- Integrated FU (Follow Up) and NFU (Non Follow Up) controls
- Emergency telegraph systems
- Indication and human machine interfaces

Designed & engineered according to the leading class societies
