QUALITY IN COMMAND - SINCE 1937

# PROPULSION PRODUCT LINE

Today's ships have to comply to high emission and environmental standards. Contributing to these standards starts with the propulsion lever that controls the engine and propeller. Combining high quality with different models enables Kwant Controls to provide the perfect control unit for any type of propulsion. Features such as the telegraph functionality and haptic feedback can be integrated in our control units.

BUK-B

BUK-C

BUK-G

BUK-H

- Powder coated seawater resistant aluminum
- Customizable in different colors
- Double and single speed levers
- Customizable detents
- Adjustable friction
- Dimmable LED-illuminated dials
- Customizable dials
- Minimum inbuild depth of  $\leq 60$ mm
- IP56 tested
- Contactless sensor technology
- 4-20mA / CAN / Volt
- Optional microswitches
- Motorized execution
- Standard with redundant output
- Executed with pluggable connectors
- Plug & play, no scaling required
